Summary

Software Development Engineer with strong foundations in **Data Structures, Algorithms, and Object-Oriented Design**. Experienced in building **backend services and REST APIs** using Java, Python(FastAPI), and Node.js, with working knowledge of frontend development. Proven problem-solver with **250+ LeetCode problems**, seeking software engineering roles across frontend, backend, or full-stack development.

Technical Skills

Languages: Java, Python, C, JavaScript, TypeScript

Backend & Systems: Node.js, Express, Flask, RESTful APIs, FastAPI

Frontend: React.js, HTML, CSS

Databases: MySQL (SQL), PostgreSQL (SQL), MongoDB (NoSQL)

Concepts: Data Structures, Algorithms, OOP, API Design, Authentication, SDLC, CI/CD Fundamentals

Tools & Platforms: Git, GitHub, Postman, VS Code, Supabase (BaaS), Netlify, Vercel, Render, Railway

Education

Anurag University, Hyderabad — B.Tech. Computer Science — CGPA: 8.29 — (2022–present)

Sri Chaitanya Junior College — Intermediate — 96% — (2022)

Sri Chaitanya High School — SSC — GPA 10/10 — (2020)

Internships

AICTE – Edunet Foundation — AI/ML Internship

- Implemented Logistic Regression, SVM, and Random Forest models achieving **85%+ accuracy**.
- Designed modular Python pipelines for data preprocessing, training, and inference.
- Exposed inference logic through API-style interfaces to support scalable system integration.

Deloitte (via Forage) — Data Analyst using GenAI

- Built Python-based backend scripts to process large datasets and generate analytical reports.
- Developed reusable modules for KPI computation, anomaly detection, and validation checks.
- Simulated API-driven workflows resembling production data pipelines.

Tata (via Forage) — GenAI & Data Analyst

- Created reusable Python EDA and preprocessing components following clean code principles.
- Integrated modular prediction workflows into larger software-style systems.
- Automated insight generation using prompt-based GenAI pipelines.

Projects

AI Flow Studio — Scalable Document Query Platform

- Built a full-stack document query system with REST APIs for upload and semantic search.
- Implemented document ingestion, chunking, and vector-based indexing for efficient retrieval.
- Implemented Python-based ETL pipelines for data extraction, transformation, validation, and structured storage.
- **Tech Stack:** FastAPI, React, PostgreSQL, ChromaDB, Docker

Link3D — Secure URL Management Platform

- Developed an authenticated URL shortening service with expiration and analytics tracking.
- Designed REST APIs for link creation, redirection, and lifecycle management.
- Implemented backend validation and user-scoped access control.
- **Tech Stack:** React, TypeScript, Supabase, REST APIs

MyJarvis — Real-Time AI Interaction System

- Built a real-time voice-enabled application integrating speech processing and backend orchestration.
- Managed session-based state and secure user authentication.
- Designed modular backend services to handle concurrent requests.
- **Tech Stack:** React, TypeScript, Node.js, Supabase, REST APIs

Achievements

- Solved **250+ LeetCode problems** covering arrays, trees, graphs, DP, and hashing
- HackerRank Badges: Python (5), Java (4), Problem Solving (3)

Certifications

- Simplilearn / SkillUp — Prompt Engineering
- Infosys Springboard — Python & Java
- CCC — Competitive Coding 2024
